

acqua therapé

New and Improved formula designed specifically for health, wellness and bather comfort

Experience a
new level in mineral
water bathing

ASTRALPOOL 

Why Acquatherapé?

Mineral water bathing is nothing new. For millennia, people have sought out the mineral springs and seas across the globe for the healing and relaxation properties.

Many mineral blends claim to emulate the same benefits of the mineral waters you may find in nature, but these are best suited to the lakes, springs or seas they originate from. When used in a swimming pool however, these blends simply do not work, or they are diluted so much from the natural reality they are rendered ineffective.

The new Acquatherapé blend by AstralPool has been designed to provide the best blend of minerals at specific ratios for a pool environment. All with the purpose to ensure caring for your new mineral pool is simple, without compromising on quality and comfort.

Feel the difference

AstralPool have a great range of products to bring your new Acquatherapé mineral pool to life and, in turn, provide you with years of exceptional mineral water bathing experience.

We recommend pairing the **Viron eQuilibrium chlorinator** with in-built intelligence and water chemistry monitoring capabilities.

Combine this with one of the **Viron XT Pumps** to get full AI mode and control the running of the water flow to get maximum efficiency and performance.

We also recommend using glass media in your **AstralPool filter** to get the best water clarity and feel, however you can also use a cartridge filter if it's better suited to your pool.

A refreshing new mineral blend

Acquatherapé's new formula has taken into account all the working components of your pool, ensuring it all works seamlessly and effectively. The key is to keep things balanced, just as your pool water needs balance. For the minerals to work effectively and provide all the desired benefits such as feelings of relaxation, bather comfort and increased water clarity to name a few, the minerals need to be at the ideal ratio for your pool environment. Too much or too little of one element can negatively impact the water and performance of your equipment.

To take your new Acquatherapé mineral pool to the next level, we recommend adding the [AstralPool UV sanitiser](#). This non-chemical water purification system works together with your chlorinator to reduce chlorine use to a bare minimum

as the ultraviolet rays destroy all the organic debris in the pool water. This effectively helps pave the way for the ultra-low residual chlorine to do its work quickly and easily.

How to

Acquatherapé can be easily added to any existing pool by using our **Acquatherapé Transform** product.

For a **liquid chlorine pool**, simply add **1 x bag of Acquatherapé Transform for every 25,000L**; then adding **1 x bag every 6 months** to maintain water feel and quality.

If you have an **existing saltwater pool**, add **1 x bag of Acquatherapé Transform for every 25,000L** for the initial change over, then use **Acquatherapé 10kg bag** when you need to top up your salt levels.

Or for **all new pools** use **4-5 bags of Acquatherapé for every 10,000L**. Then simply add the required **Acquatherapé 10kg bag** when your 'add salt' light comes on.

Australian made

Acquatherapé is a great Aussie story; the formula was developed and patented here in Australia. All minerals—where possible*—are sustainability and locally sourced (such as solar evaporation fields off the pristine waters around the Great Australia Bight and the Mid Queensland coastlines).

Acquatherapé is also bagged locally and distributed to all our dealers and outlets around the country. Best of all, it helps our local suppliers provide jobs and support their local communities.

*some minerals are not available in commercial quantities from Australia
